GitHub: github.com/ikishanthummar | LinkedIn: linkedin.com/in/ikishanthummar

Full Stack Developer with 6.2+ years of experience designing and delivering scalable enterprise applications across fintech, CRM, event management and media platforms. Specialized in ASP.NET Core, C#, Angular, SQL Server and REST API development. with strong expertise in building secure payment processing systems, webhook integrations, and high-performance backend architectures. Experienced in designing services based, Clean Architecture, JWT-based authentication, transaction processing, background services, and CI/CD pipelines. Proven ability to develop complex applications from scratch, take ownership of end-to-end feature development and collaborate with cross-functional teams to deliver reliable, production-grade software.

EDUCATION

Bachelor of Computer Applications (BCA)
2016 – 2019 | First Class

TECHNICAL SKILLS

Languages: C#, SQL, TypeScript
Backend: .NET Core, .NET Framework, .NET MVC, Entity Framework Core, Dapper, LINQ, REST API
Frontend: Angular (v15+), React, HTML5, CSS3, Bootstrap, jQuery, JavaScript
Database: SQL Server, Stored Procedures, Views, Functions, Indexing, Query Optimization
Architecture: Clean Architecture, Microservices, JWT Authentication, DI, Asynchronous Programming
Tools: Git, Postman, IIS, Visual Studio, VS Code, Hang fire, Firebase
Cloud: Azure App Services, Functions, Blob Storage, CI/CD, AWS (S3 Bucket, EC2, Cache, RDS, IAM)
AI Development Tools: ChatGPT, Claude, Google AI Studio

PROFESSIONAL EXPERIENCE

VSI Infotech LLP, Surat, Gujarat

Full Stack Developer (J*an 2026 – Present)*

- Designed and implemented end-to-end payment processing systems, handling transaction lifecycle including initiation, verification, and reconciliation.
- Built scalable webhook processing systems to handle real-time payment events with high reliability.
- Developed background job services with retry mechanisms, improving failure recovery and ensuring transaction consistency.
- Integrated multiple third-party payment gateways and APIs, ensuring seamless communication and fault tolerance.
- Engineered call back handling systems to maintain accurate transaction state across distributed systems.
- Improved system reliability and reduced transaction failures through robust error handling and retry strategies.
- Collaborated with cross-functional teams to design scalable and secure backend architectures.

InfiAdd TechSolution, Surat, Gujarat

Full Stack Developer (*Nov 2022 – Dec 2025)*

- Spearheaded the development of 10+ backend APIs utilizing ASP.NET Core, which resulted in a reduction in response time and improved the efficiency of the application.
- Integrated third-party APIs (Stripe, Firebase, Mailchimp) for seamless payment, notification, and marketing functionalities.
- Implemented role-based authentication using JWT, enhancing app security with structured permission models.
- Developed a media management platform handling image, videos, PDFs, and PPTs, enabling real-time previews and controls.
- Deployed and managed backend services on Azure App Services.

Swicktech Solution, Surat, Gujarat

Backend Developer *(Apr 2021 – Oct 2022)*

- Refactored legacy ASP.NET MVC applications into modular, maintainable .NET Core projects and converted using angular.
- Redesigned frontend components using Angular, building dynamic user management and reporting dashboards.
- Worked on Angular-based UI forms for user management and reporting interfaces.
- Enhanced SQL Server procedures and indexing to improving report generation.
- Supported the delivery of over 15 backend features through collaboration and code reviews.

Arqonics Infotech, Surat, Gujarat

Trainee Developer *(Apr 2020 – Mar 2021)*

- Developed admin panels with full CRUD functionality using C# and .NET Framework, improving operational efficiency.
- Automated repetitive manual workflows, saving 25+ hours per month and reducing human errors.
- Built responsive UI pages using HTML, CSS, and Angular for internal tools and data entry systems.
- Strengthened SQL query skills through data manipulation and reporting use cases.
- Gained hands-on experience in end-to-end feature development, from database design to UI integration.

Projects

NexivoPay — *Full Stack Developer*

Tech Stack: .NET 10, ASP.NET Core, C#, React, SQL, PostgreSQL, Dapper, EF Core, Hangfire, Docker, AWS (S3, Redis Caching)

- Architected and developed from scratch, a scalable payment platform covering merchant onboarding, customer management, checkout, transaction processing, and payment gateway integrations.
- Designed and implemented the complete transaction lifecycle for deposit and payout flows, including payment details, charges, gateway responses, callbacks/webhooks, status history, reconciliation, and transaction expiry.
- Built a secure and resilient architecture with API Key/Secret Key authentication, JWT authorization, role/permission management, IP whitelisting, rate limiting, centralized exception handling, and CorrelationId-based distributed logging.
- Developed Hangfire-based background processing and retry mechanisms for transaction expiry and scheduled operations, ensuring reliable processing and recovery from transient failures.
- Established Docker-based deployment and GitHub Actions CI/CD pipelines using self-hosted runners, while applying Clean Architecture, SOLID principles, asynchronous programming, and scalable database design throughout the platform.

NaguPay — *Full Stack Developer*

Tech Stack: ASP.NET Core, ASP.NET MVC, C#, jQuery, SQL Server, Hang fire, Payment Gateway APIs

- Designed and implemented a secure checkout flow for Hosted payment processing and transaction management.
- Developed an automated settlement summary feature that generates reports and emails them on configurable schedules using Hang fire.
- Integrated payment gateway APIs with webhook and callback handling to ensure accurate transaction processing.
- Optimized application code, SQL queries, and stored procedures to improve performance and maintainability.

ArtCircle — *Backend Developer*

Tech Stack: ASP.NET Core, MS SQL Server, Dapper ORM, Stored Procedures

- Built user and company modules using Database-First approach with Dapper ORM.
- Implemented custom middleware for secure, role-based authentication.
- Designed complete KYC workflows for users and companies with verification APIs.
- Followed clean architecture principles for scalable and maintainable code.

LogicueCRM — *Full Stack Developer*

Tech Stack: ASP.NET Core, Angular, MS SQL Server, Dapper ORM, Stored Procedures

- Designed and developed a full-featured CRM system independently, covering both frontend and backend.
- Utilized Dapper ORM and stored procedures for high-performance and secure data operations.
- Engineered core modules including Account Management, Contact CRUD, Product & Category Management, and Quotation Generation.
- Integrated multi-currency support with dynamic pricing logic for quotations.
- Developed secure middleware and modular, reusable services for maintainable and scalable architecture.

GridWall Desktop/Web — *Backend Developer (Team Project)*

Tech Stack: .NET Core, Windows Forms, React.js, SignalR, SQLite, MySQL

- Contributed to both a Windows Forms desktop app and a React-based web interface using shared backend APIs.
- Developed APIs enabling multi-screen video streaming with dynamic window mapping.
- Integrated SignalR for real-time screen updates across devices.
- Implemented role-based access, controller/screen CRUD, and a custom database sync service.

EventPrix — *Backend Developer*

Tech Stack: ASP.NET Core, MS SQL Server, Stripe Integration

- Built RESTful APIs with a robust 4-layer architecture to support a scalable event management platform.
- Implemented features like multiple ticket types, event-specific pricing, and coupon code system.
- Integrated Stripe for seamless and secure online payment processing.
- Used SQL Views to enhance query performance and streamline data fetching.
- Developed role-based access for event organizers and attendees.

TwoTixx — *Backend Developer (Team Project)*

Tech Stack: ASP.NET Core, MS SQL Server, Stripe Integration

- Developed secure APIs for a ticketing platform supporting OTP-based user login.
- Integrated Stripe for reliable and secure transaction handling.
- Built temporary seat booking logic to ensure fair allocation during high demand.
- Created endpoints for event listings, ticket selection, and booking flows with transactional integrity.
